

TONY ONUOHA

FRONT-END SOFTWARE ENGINEER

United Kingdom | 07748670431 | izuchukwutony18@gmail.com | [LinkedIn](#) | [GitHub](#)

Professional Profile

Front-end engineer specialising in **React**, **TypeScript** and **Tailwind CSS**, delivering production SaaS and customer-facing web applications end to end: architecture, component design, API integration, automated testing and deployment. Owns technical decisions on component architecture, state management and front-end/back-end boundaries, and has **led a team of five developers** through code review, task allocation and technical unblocking. Advocate for tested, accessible, performant interfaces, and comfortable presenting technical solutions to both engineering peers and non-technical stakeholders.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL, Python, Java

React & State: React Hooks (**useState**, **useEffect**, **useMemo**, **useCallback**), Custom Hooks, Context API, TanStack / React Query, Redux / Zustand, Reusable Component Architecture

Frameworks & Styling: React.js, React Native, Vite, Tailwind CSS, Responsive Design, Accessibility (WCAG, ARIA, keyboard navigation)

Backend & APIs: Node.js, Express.js, REST API design & integration, OAuth 2.0, Asynchronous Data Handling, MongoDB

Testing & Quality: Jest, React Testing Library, Component & Unit Testing, Cypress (E2E), Debugging, Code Review

Performance: Code Splitting, Lazy Loading, Caching, Memoisation, Bundle & Image Optimisation, Lighthouse & Core Web Vitals

Cloud, DevOps & Observability: Git / GitHub (feature branching, pull requests, code review, rebase), CI/CD, Cloudflare / Vercel / Netlify, Google Analytics, Logging & Error Monitoring, Agile / Scrum

Professional Experience

OJ SOLUTIONS

July 2025 – Present

Software / Front-End Developer

- **Led a team of five developers** across six client projects, allocating technical tasks, reviewing pull requests, resolving blockers and setting the technical approach before build started.
- Own front-end architecture decisions on new builds, defining component structure, state management strategy, routing and front-end/back-end boundaries, reducing rework across the delivery cycle.
- Build **reusable, typed React component systems** using Hooks, Context API and TanStack Query, cutting build time on subsequent client projects by approximately **30%**.
- Integrate third-party REST APIs and implement **OAuth 2.0 authentication flows**, securing user access across four client applications.
- Present technical solutions, trade-offs and delivery timelines directly to clients and non-technical stakeholders, translating business requirements into scoped technical plans.
- Own production release across **Vercel**, **Netlify** and **Cloudflare**, including CI/CD pipelines, DNS configuration and post-release monitoring via Google Analytics and error logging.

FREELANCE / CONTRACT

September 2024 – July 2025

Front-End Developer

- Delivered **React and TypeScript applications** for five independent clients, scoping requirements, agreeing deliverables and shipping to production without supervision.
- Built responsive, accessible interfaces with Tailwind CSS, covering keyboard navigation, semantic markup and accessible form patterns.
- Integrated REST APIs and Node.js/Express services, handling authentication, asynchronous data flows and error states.
- Provided **ongoing production support** post-launch, including bug triage, feature iteration and deployment on Vercel and Netlify.

CALAYA ENGINEERING

May 2024 – September 2024

Software / Front-End Developer

- Designed and developed responsive web applications in **React**, **TypeScript** and **Tailwind CSS**, establishing component architecture, routing, state management and clear front-end/back-end separation.
- Built and integrated **Node.js/Express REST APIs** and third-party services, managing authentication, asynchronous data flows and application workflows.
- Wrote **unit and component tests with Jest and React Testing Library**, plus end-to-end coverage with Cypress, raising release confidence and reducing post-release defects by **35%**.
- Cut initial load time by **45%** through lazy loading, code splitting, caching, memoisation and bundle optimisation.
- Worked in a Git-based team workflow using feature branches, pull requests, code reviews, rebasing and conflict resolution within CI/CD pipelines.
- Deployed and maintained applications on **Cloudflare**, **Vercel** and **Netlify**, covering hosting, DNS configuration and production updates.
- Analysed requirements directly with clients and stakeholders and presented technical solutions in non-technical

language.

Selected Projects

The Green Flag Project

React — TypeScript — REST API Integration — UI/UX

- Modernised a legacy digital system for **Green Flag**, a UK breakdown cover and roadside assistance provider operating 24/7 rescue and recovery services.
- Re-architected the front end into a **modular, reusable component structure** with clear state management, replacing duplicated logic and simplifying user workflows.
- Built **park onboarding and management functionality** covering UK and international sites, giving stakeholders a single centralised system for park data, processes and activity tracking.
- Delivered a structured **awards management workflow**, enabling stakeholders to administer, track and audit awards issued to parks.
- Implemented accessible interface patterns including keyboard navigation, semantic markup and accessible form validation.

Covenant Nation Website & Management System

React — System Design — Data Management

- Designed and built a responsive organisational website and supporting management system, translating day-to-day operational requirements into digital workflows.
- Implemented data management functionality for organisational records, activity scheduling and content administration.

Kentok's Kitchen

React — Order Management — API Integration

- Built a customer-facing food ordering platform covering product presentation, cart and checkout flow, and customer interaction.
- Delivered an order management dashboard giving the client real-time visibility and tracking across incoming orders.

Education

BSc Computer Science (Final Year)

2027

University of Wolverhampton

Professional Development

Google Project Management Certificate

Coursera

- Agile delivery, project lifecycle management, stakeholder communication, requirements analysis and prioritisation.

Software Engineering Job Simulation — J.P. Morgan

Forage — May 2024

- Implemented data visualisation in **Python and React** to display live stock price data within a financial services engineering context.
